OFFLINE/ONLINE TRAINING PLATFORM

OFFLINE TRAINING PROGRAM

Offline training refers to educational programs or workshops that take place in physical settings rather than online platforms. Participants gather in a specific location to engage in face-to-face learning experiences facilitated by trainers or instructors. This type of training offers interactive sessions, personalized instruction, and opportunities for hands-on activities, discussions, and networking. It is particularly valuable for subjects that require practical demonstrations, real-time feedback, and direct interaction among participants. Offline training provides a focused and immersive learning environment, fostering skill development, knowledge acquisition, and the cultivation of soft skills through direct engagement and experiential learning.

ONLINE TRAINING PROGRAM

Online training refers to educational programs conducted over the internet. Participants can access learning materials, lectures, and resources remotely, often through a learning management system or a dedicated online platform. This mode of training offers flexibility in terms of time and location, allowing learners to study at their own pace and convenience. Online training may include video lectures, interactive quizzes, discussion forums, and assignments that can be completed digitally. While lacking face-to-face interactions, online training provides the convenience of self-paced learning and the ability to accommodate a wide range of participants regardless of their geographical location.
